GOLDEN EAGLE NURSERY

Golden Eagle, Ill.

WE
PAY

All shipping charges are prepaid on all orders of \$2.00 or more (orders for less than \$2.00 not accepted). We make no charges for bailing, packing, shipping, etc. Our prices are net cost to you. No back charges to pay.

TERMS—Cash in full with orders for less than \$30.00. 50% cash with orders for \$30.00 or more.

For Quantities Over 100, Write for Special Wholesale Price. State Varieties and Size Wanted.

DOUBLE RED DELICIOUS. Genuine. So named first by GOLDEN EAGLE NURSERY. Our young-bearing strain has no rival in color, size, flavor; juicy and crisp. Fine for home and commercial orchards. Trees healthy, thrifty, long-lived, very productive, disease-resistant and hardy.

DOUBLE RED JONATHAN. Genuine. So named first by GOLDEN EAGLE NURSERY. Our young-bearing strain colors two weeks earlier than the regular Jonathan; has all the qualities of the regular Jonathan. An all-purpose apple, the tree is long-lived, vigorous, hardy, productive. Should be in all commercial and home orchards.

DOUBLE RED ROME BEAUTY. Genuine. So named first by GOLDEN EAGLE NURSERY. Fruit large and very attractive; a variety desirable for both market and home use. White flesh, crisp, juicy. Annual cropper of large, hi-colored, hi-quality apples.

BEWARE of those who make false TRADE MARK CLAIMS regarding early or young-bearing strains and Whole-Root Process.

Golden Delicious. Genuine improved young bearing strain. Our scions and buds are taken from bearing trees that have proven the best in commercial orchards; we collect all our scions and buds for all of our varieties from high-type parent trees. "Best by Test." Large yellow fruit, long keeper, juicy to the last. Fine for market and home use; producer of large golden-yellow crops of huge apples annually; one of our leaders; trees are hardy and strong growers; no other yellow apple can replace it; no orchard is complete without it.

Double Red Wealthy. Our strain has the most attractive red color of the various strains, so named and introduced by GOLDEN EAGLE NURSERY. Takes full color two weeks earlier than the old type and long before it is fully ripe, making it one of the most desirable market and home-orchard varieties; the very best, long keeper, excellent quality.

Double Red Willowtwig. Originated in our orchard; has all of the good qualities of the regular variety, plus a very noticeable and attractive color. Late keeper. Fruit large, roundish, somewhat flat, crisp and juicy to the end of the season.

Double Red Redbird. Tremendous producer of beautiful, attractive red fruit, medium to large size, very early, strong grower and hardy; comes into bearing at an early age.

Double Red Winesap. An old-time standby that pleases all who taste its rich wine-flavored crisp flesh; tree very hardy and productive; fruit, medium to large; long keeper.

Double Red York. New improved, with additional all-over color; a standard variety; bears young; flesh firm, crisp, mild sub-acid; somewhat aromatic.

Jonathan. An old standard sort, but giving way to the Double Red Strain. A very good home and commercial apple.

Grimes Golden. Fruit round, above medium size; skin of deep clear yellow with dots of russet; flesh rich cream color, juicy, mild sub-acid; desirable for home and market.

Champion. Our strain comes into bearing at an early age; mid-season; trees are thrifty, hardy, large and spreading, productive. Fruit medium to large; clear white flesh.

Double Red Duchess. This variety combines the qualities of the Old Duchess, plus the full red color; strong grower, productive, medium to large size; mid-season.

Double Red Northern Spy. Fruit large, roundish, slightly conical in shape. Flesh juicy, rich, aromatic, mild sub-acid. Recognized as an apple with a "tickle the palate flavor." Tree hardy, healthy, productive and long lived.

Double Red Stayman. A Stayman in every respect, plus all-over red; large, conical. Flesh cream colored, rich in juice and delightful flavor. Strong growing trees and productive. Valuable for home and commercial orchards.

Double Red McIntosh. Of medium size; round, even form; skin bright red; attractive appearance. Flesh snow-white, tender, juicy, distinct flavor. Tree hardy, long-lived, productive.

Yellow Transparent. Very early; extra hardy; fruit of good size, uniform, round; skin thin, tender, smooth. Flesh white and fine-grained, juicy, slightly sub-acid. Strong upright grower. Our early bearing strain comes into production unusually early. An excellent apple for home and market.

Double Red Moody. "Crab." Attractive, beautiful red fruit, hangs on long stems; comes into production soon after planting. Should be in every home planting; fine for jelly.

Whole-Root Process	12 or		
	1 to 5,	6 to 11,	More,
Early Bearing Strains	Each	Each	Each

4 to 5 ft.....	1.10	1.00	.95

There is nothing more expensive than a cheap piece-root tree. Plant the best and get off the cheapest. Quality has no substitute.

PEACHES

Elberta. Golden-yellow freestone. Our special strain—the "yardstick" by which all other peaches are measured. Mid-season; peach-growers' favorite. Elberta is grown with profit in every peach-growing state. Flesh, yellow with red at the pit; juicy, firm but tender; sweet; excellent quality and good shipper.

J. H. Hale. A favorite with the commercial and for the home peach growers; has many merits to commend it. Flesh is yellow, red pit, juicy, fine grained, sweet. In shape, it is almost round; attractive; freestone; 10 days later than Elberta.

Hale Haven. Our new improved has proven itself one of the best ever introduced. Ripens just ahead of the Elberta. Our new strain has a most desirable flavor, being tender, juicy, melting, sweet and sprightly; has every quality desirable in a peach. Freestone.

Golden Jubilee. Attracts attention everywhere. Large Elberta type; skin yellow, blushed with red. Ripens three weeks earlier than Elberta. Freestone. Flesh yellow, juicy, tender and sweet.

Crawford Late. The quality of this yellow-flesh variety can scarcely be equalled. The peach is large with golden-yellow skin and red cheek. Juicy, firm but tender, sweet but sprightly, richly flavored freestone.

Belle of Georgia. Mid-season. Elicits praise from all who know it because of its great beauty of its fruit; tender; full of pleasing juice; a favorite for home and market. White freestone.

Champion. Mid-season. It is difficult to find words which will do justice in describing this white-fleshed sugar-sweet variety; tender flesh juicy, pleasant flavor, freestone. Tree hardy strong grower, very productive.

Labor-Day Champion. Our new late Champion has all of the qualities of the regular Champion. White freestone, plus the finest quality white late peach ever introduced. Flesh full of luscious juice; has a desirable sugar-sweet flavoring. Probably we should have named it the "Peach of Satisfaction." Holds up well in all forms of canning processes. Tree thrifty, large and strong; bears heavy loads of large peaches.

Early Elberta. Golden-yellow freestone; ripens 10 days ahead of the Elberta. Fine for canning. Tops the market; juicy; sweet.

Old Mixion Cling. Tree strong grower; heavy producer. Flesh white, crisp and full of luscious sweet juice. Ripens 20 days after Elberta.

Double Red Giant. World's largest peach. Full red all over 10 days before it is ripe; yellow freestone; ripens two weeks after Elberta.

Krummel. Late, yellow freestone. Large, round, golden and red color; very attractive; best canning quality. Our early-bearing strain bears very young. For home and commercial markets it is a favorite.

Elberta Cling. Ripens 10 days after Elberta. Flesh golden yellow, firm, sweet and juicy; larger than Elberta. A real quality peach for pickling, with an abundance of luscious flesh.

Lemon Cling. As all of our other select young-bearing strains, it has a quality of its own. Next time you purchase canned peaches, call for LEMON CLING and you will be more than surprised at what you have missed in not procuring them before. They are so named from their shape. They are sweet, juicy, firm, medium in size, as Elberta Cling. Wonderful for pickling and eating out of hand. Five days ahead of Elberta. Heavy producer.

Heath Cling. Our strain is one of the latest peaches now under cultivation. The best of all peaches to preserve and pickle whole. The trees are large, healthy, and hardy. Skin is creamy-white blushed with red. Flesh white, juicy, firm, meaty, tender, and good in quality.

South Haven. Our extremely hardy strain—the peach for cold localities. It will stand 10 degrees colder than any other peach grown. Large yellow freestone; full red cheek. Texture tender. Week earlier than Elberta.

Red Double Red Redbird. Our young-bearing strain; bright red color; large fruit; most popular early peach grown. Productive and hardy; best of the early varieties.

Stump. This new strain of peach has all of the good qualities of the Champion and Belle of Georgia combined. Strong grower, hardy, productive; white flesh with a beautiful red cheek, juicy and sweet; freestone.

Double Red Haven. Our sensational early-bearing strain. Tops all early yellow peaches. Freestone. Smooth skin, almost fuzzless. Brilliant red color with creamy-yellow background. Reddens before it ripens; bears heavy crops.

Gage Elberta. Our new young-bearing strain of Elberta has all of the desirable qualities of the regular Elberta, plus low spreading form of the trees, making it a favorite; easy picking. Yellow freestone. If 100 or more are wanted, write for wholesale special price. State varieties and size wanted.

Whole-Root Process	12 or			
	1 to 5,	6 to 11,	More,	
Early Bearing Strains	Each	Each	Each	
1½ to 2 ft.....	\$.60	\$.55	\$.50	
2 to 3 ft.....	.70	.65	.60	
3 to 4 ft.....	.95	.85	.80	
4 to 5 ft.....	1.10	1.00	.95	

Peach trees should be planted in every home orchard. They come into production at an early age and the fruit is one that is fine for canning; easy to handle and quick canning, requiring less sugar than most other fruits.

Whole-Root Process young-bearing strain trees are an investment. Inferior piece-root trees are an expense.

CHERRIES

Early Pie. The earliest of all cherries, therefore a profitable market variety. Fruit round and light red, changing to dark red; skin thin, easily separated from the pulp. Flesh pale yellow with light pink juice, tender and melting; stone small and free. Has a delicious flavor; very palatable when eaten from the hand. Requires only a small quantity of sugar when

canning or for table use—truly a favorite for home use. Sell readily and profitable in the market due to its early ripening. The fruit is usually produced in clusters of two to three cherries. Hangs onto the tree over an unusually long period. This is a decided advantage as it lengthens the season of use. The tree is a heavy bearer and thrives on a large variety of soils. The only way to fully appreciate its many good qualities is to plant **Early Pie**.

Montmorency, Large. Late June. The leading sour cherry. Canning companies and fruit stands provide a ready market; a big commercial cherry that spells abundant profit for the planter; an unexcelled pie variety. Tree yields regularly and abundantly, and its natural habit of growth makes picking of fruit a pleasure. The tree is very hardy and bears unusually young, often within one year after planting. Fruit is of large size and good flavor; bright red; hangs well to the tree; more often borne singly. It is highly recommended for every sour cherry use. You will "go right" when you plant **Montmorency Large**.

Crimson Eagle. A variety that deserves consideration by every cherry grower. Tree big producer, fruit clustering to the branches. Being a late variety, it always has a ready market. The heavy foliage aids in protecting the fruit from the birds which is a desirable characteristic. A fine canning, table or market cherry. Fruit extra dark, bordering to black; large and attractive. Flesh hard and pleasing to the taste. Especially welcome, as it is available after other cherries are gone. Often called an "out of season" cherry, thereby commanding a high price and a ready market. Sweet cherry.

Black Tartarian. Early to mid-season. Fruit very large with small pit; heart-shaped; very dark, almost black. Pleasing to the eye and delightful to the palate. Handsome purplish-red flesh; meaty, juicy and rich. Excellent for table use and canning. Tree a regular bearer, grows to very large size, and lives to an old age; adapts itself to widely different soils and climates. Sour Varieties: Early Pie. Montmorency Large. Sweet Varieties: Black Tartarian. Crimson Eagle.

PLUMS

Abundance. Early, large; color pinkish, changing to dark red, with thin bloom. Yellow flesh. Very juicy, sweet and tender; pleasantly aromatic. Hardy; very productive. Adaptable to a wide diversity of soils and climates.

Burbank. Early, about one week after Abundance. Large, cherry-red, with thin lilac bloom. Flesh amber-yellow with rich, sugar flavor; high quality and very productive. A product of Burbank. It should be in every orchard.

Italian Prune. Late, large size, freestone, dark purple, delicious. Fine for drying.

Gold. Early. Fruit is very large, golden yellow, semi-transparent, covered with bright scarlet-red blush.

Damson. Large size; dark purple; very productive. The very best for preserving. The popular old-fashion large damson variety.

German Prune. Skin purplish-black with thick bloom; flesh yellowish-green, juicy, firm, sweetish, mild, pleasant flavor; very good. Freestone. Largely grown all over the world. Tree vigorous, healthy, productive. Good market for fruit. Valuable for canning, preserving, drying.

America. This giant plum originated from the old Robinson crossed with the Abundance, the same combination that produces the noted Gold Plum. The fruit is three times as large as Wild Goose or Robinson, and the glossy coral-red fruit is not surpassed in beauty by any plum. The bright yellow flesh is moderately firm and delicious—so good that those who do not like plums call for more and keep on eating the America. Ripens two or three days later than Abundance.

Black Diamond. This plum has the advantage by being very productive of medium to large size fruit with a very small pit, thereby producing an abundance of flesh for the size of the plum. Juicy and sweet; desirable for canning and preserving. Trees are hardy, strong growers; come into bearing very young.

Indian Heart. Red-fleshed plum. A delicious deep-purple juicy, sweet, rich plum; large size. Trees are strong growers, healthy, hardy, regular bearer of large crops. Season early.

Sapa. Red-fleshed plum. A rich, sweet plum, productive, and one of the best in the red family.

APRICOTS

Early Gold. Color wholly orange. Season middle of July. One and a half inches in diameter; roundish oval. Flesh orange-yellow, juicy, rich and sweet. Freestone. Tree hardy and productive.

Moorpark. The old standby; yellow with red cheek; season last of July. A freestone of superior quality.

PEARS

Bartlett. Season, August. Fruit large, pyramidal in shape. Color clear yellow with a faint blush on the exposed side. Fine-grained, buttery and rich; very juicy; excellent flavor; of good quality. Is excellent for canning. Its splendid qualities render it a general favorite everywhere. Its fruits are very popular in American markets; very extensively grown for commercial purpose. Trees are vigorous, attain large size, bear young, live long, easily managed in the orchard.

Duchess. Season, October. The fruit excites great admiration and wonder by their enormous size. Color, yellow and russet; flesh yellowish-white, firm, becoming somewhat melting and quite tender when fully ripe; very juicy, sweet, excellent flavor, rich and delicious.

Kieffer. "Winter Pear." Fruit large to very large, roundish oval. Skin rich golden yellow, with a fine red blush on the sunny side. Flesh white and very good. If gathered as soon as matured and then allowed to ripen in the house, the fruit becomes much improved and, being a remarkable keeper, will last all winter.

GRAPES

Agawam. Dark red. Qualities commending are large size of bunch and berries, rich, sweet, aromatic flavor, attractive appearance, excellent keeping qualities. Vigorous of vine and of self-fertilization. Ripens in September shortly after Concord. Fine keeper.

Caco. A new red grape of excellent quality. Ripens mid-season. A rich wine color, it is a valuable and highly desirable grape for garden and vineyard.

Concord. The Concord is well known by all. The most widely grown of the grapes of this continent. Readily adapts itself to varying conditions. Grown with profit in every grape-growing state. Color black.

Fredonia. Is the best early black grape ever introduced. The vine is vigorous, hardy, and productive. The clusters are large, evenly formed and compact, with large round berries. The flesh is very juicy and excellent quality.

Niagara. The leading American white grape, holding the leading rank of this color that the Concord does among the black varieties. Valuable for its plentiful and sweet, delicious juices. It is one of those you can eat out of hand and enjoy. Vine very hardy, vigorous and productive.

BLACKBERRIES

Alfred. A comparatively new blackberry that has given good results wherever planted. Immense sized berries, practically coreless; heavy producer and very hardy. Worthy new commercial variety; ripens over a long period of time.

Early Harvest. Valuable as one of the earliest; berries of medium size and good quality; strong grower and exceedingly prolific.

Eldorado. Is very hardy, enduring the winters of the northwest with safety; very productive. Large, full clusters of evenly-ripened fruit; sweet and good quality.

No. 1, Large Size	5 to 10,	11 to 25,	50 to 100,

RASPBERRIES

Cumberland (black). Early, large sized, firm berries of fine quality; healthy, vigorous and productive; dependable and popular.

Morrison (black). A new raspberry. It ripens a little later than Cumberland. The color is an intense, glossy black, so attractive that these huge berries sell at sight. The fruit has almost no seed. This is a most promising new black raspberry.

Latham (red). World's leading red raspberry, a blue-ribbon winner for the home and commercial grower. It simply cannot be equalled. Tremendously productive; large berries.

Thornless Boysenberry. 3 for 95c; 10 for \$2.95. No. 1 Plants.

Red Lake, Currant. 2 for \$1.50; 10 for \$4.95. No. 1 Plants.

GARDEN ROOTS

Asparagus Roots. Strong No. 1, 2-year roots. 25 for \$1.17; 100 for \$3.75; 250 for \$8.75.

Rhubarb. Strong No. 1, 2-year roots; double red stalks, requiring much less sugar than the old green stalk variety. 1 to 10, each 85c; 11 to 25, each, 80c.

Horseradish. Strong No. 1 roots, 10 for 75c.

SHRUBS

Almond. Early-flowering strain. Pink-flowering. First to bloom in the spring. Double rose-like flowers. Fragrant.

1 to 2 ft., 2 for \$1.55; 4 for \$2.85.

2 to 3 ft., 2 for \$1.85; 4 for \$5.55.

Althea (Rose of Sharon). Upright shrub, blooming August and September. Colors pink, purple, red, white and blue.

ANEMONAEFLORUS—double, pink.

ARDENS—double, purple.

LUCY—double, red.

JEAN D'ARC—double, white.

COELESTRIS—New, single, blue. 10c extra.

Lilac. French. Named varieties. April-May.

ALPHONSE LAVALLEE. Pyramidal clusters of double blush-lilac flowers.

BELLE DE NANCY. Great panicles of double satiny rose blooms, white center.

JAN VAN TOL. Large trusses of single, pure white flowers; one of the best.

LUDWIG SPACHT. Single dark purplish-red; long panicles.

MARECHAL FOCH. Large loose trusses of single red flowers.

MARIE LAGRAYE. Single, slender panicles of creamy white. Blooms profusely.

PRESIDENT LINCOLN. Clear, rich blue flowers with large, fragrant florets. New.

WALDECK-ROUSSEAU. Double, open panicles of rose. A landscape variety of tremendous value.

VULGARIS. The standard old-fashion garden variety; single blush-purple flowers. Thrives well in partial shade. We grow our French lilacs on their own roots to insure permanent satisfaction.
